Component — Data Schema (spins_log)

September 26, 2025

Table: **spins_log** (Minimal)

- ts (timestamp), game_id (string), session_id_hash (string/hashed)
- bet_amount (float; here = 1), outcome_id (int in $[0, k]$), payout (float in $\{r_i\}$)
- jurisdiction_id (string/enum)

Aggregates

Daily/batch: mean RTP, variance, hit-rate, counts per outcome, jurisdiction splits.

Data Quality

Range checks; missingness policy; timestamp sanity (non-decreasing per session); dedup on (ts, session_id_hash). Frequency histogram of outcome_id should match p within sampling tolerance.
